Executive Summary

National Grid in its role as EMR Delivery Body is required by the Capacity Market Rules 2014 (Rule 5.10.2) to notify the Secretary of State of the Provisional Results of the Capacity Market Auction as soon as reasonably practicable following the conclusion of the Capacity Auction. This report discharges that obligation.

The Early Capacity Auction for delivery in 2017/18 concluded on **3rd February 2017, 12:30 GMT**. The results of the auction are as follows, where any capacity figure refers to de-rated capacity, unless otherwise stated.

The Clearing Price is: **£6.95 kW / year**

The aggregate Capacity of Capacity Market Units awarded Capacity Agreements is: **54,433.634 MW**.

The CMUs to which a Capacity Agreement has been provisionally awarded and the duration of those Capacity Agreements are listed in Appendix A.

In addition to the results presented above, National Grid is required under Capacity Market Rule 5.10.3 to report any CMUs that were removed from the IT Auction System under Capacity Market Rule 5.3.3. **The Auction concluded without any CMUs being removed from the system by National Grid.**

The remainder of this report gives further detail on the Capacity Market Auction Clearing, how the Clearing Price was reached and what makes up the capacity that has been procured.

The results of the auction remain provisional for the period of 8 working days after the completion of the Capacity Market Auction, during which time the Secretary of State may annul the auction on the grounds specified in Regulation 27 of the Electricity Capacity Regulations 2014. Final results will be published once this period has elapsed.

The Auction Clearing Price

The Clearing Price is: **£6.95 kW / year**

The Early Capacity Auction cleared in **Bidding Round 14** on the **3rd February 2017, 12:30 GMT**

The Auction did not clear with an exact match of Aggregate Offered Capacity and target capacity ("Clearing Capacity") and so the Net Welfare Algorithm was used to determine price and volume.

The Net Welfare Algorithm evaluates the integral specified in Rule 5.9.6 to determine whether to include the marginal unit. The algorithm subtracts the additional cost of procuring the marginal unit from the welfare gained by procuring the marginal unit. If the result is positive i.e. the welfare gained by procuring the additional unit outweighs the cost, the unit is included, and the Clearing Price is set to the Exit Bid Price of that unit.

The result of the Net Welfare Algorithm was negative and the marginal unit was not procured.

Figure 1 shows the Demand Curve and the supply curve. The supply curve is found by cumulatively adding the Bidding Capacity of CMUs, according to their Exit Ranking.

The Aggregate Bidding Capacity of CMUs Provisionally Awarded Agreements

The Aggregate Bidding Capacity of CMUs provisionally awarded Capacity Agreements is: **54,433.634 MW**.
 A total of **59,286.062 MW** entered the Auction, of which **91.82%** received Capacity Agreements for delivery in 2017/18.

Figure 2: Breakdown of the Capacity Entering the Auction Provisionally Awarded Agreements

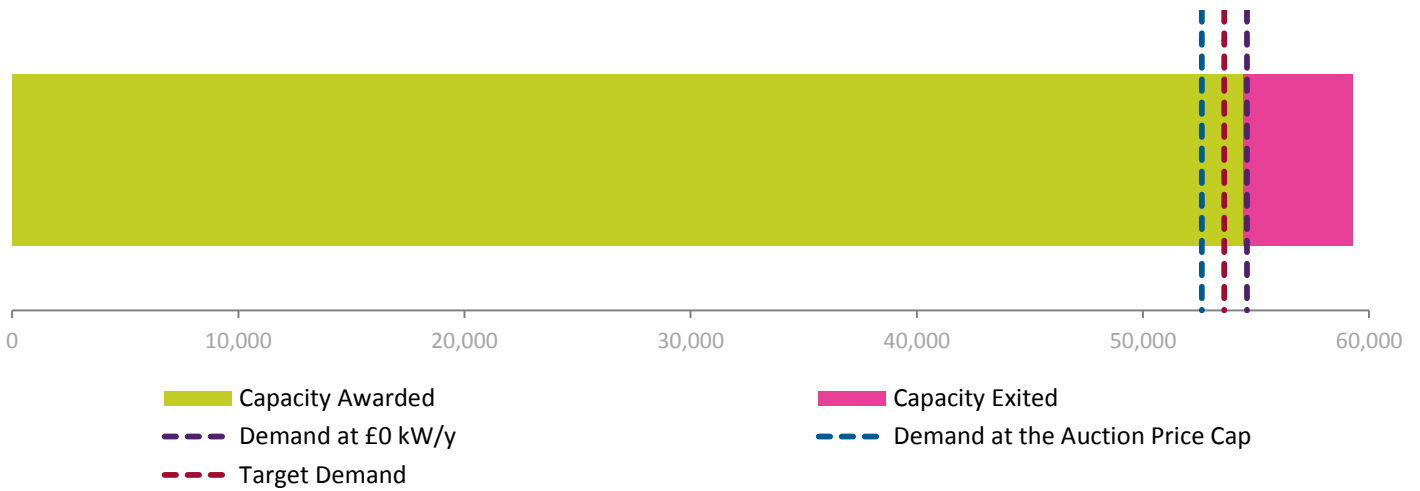

Figure 3 and Table 1 show the breakdown of the Total Awarded Capacity Agreements by CMU Type. A mixture of new and existing capacity was procured, **1,900.004 MW** of the volume of Capacity Agreements awarded is for new capacity. This is the sum of the capacity of CMUs that have been awarded agreements that are Unproven DSR or New Build CMUs.

Capacity that Exited the Auction above the Clearing Price

A total of **4,852.428 MW** exited the auction above the clearing price. This Capacity is broken down by CMU classification and technology type below.

Figure 6: Breakdown of Exited Capacity by CMU Type

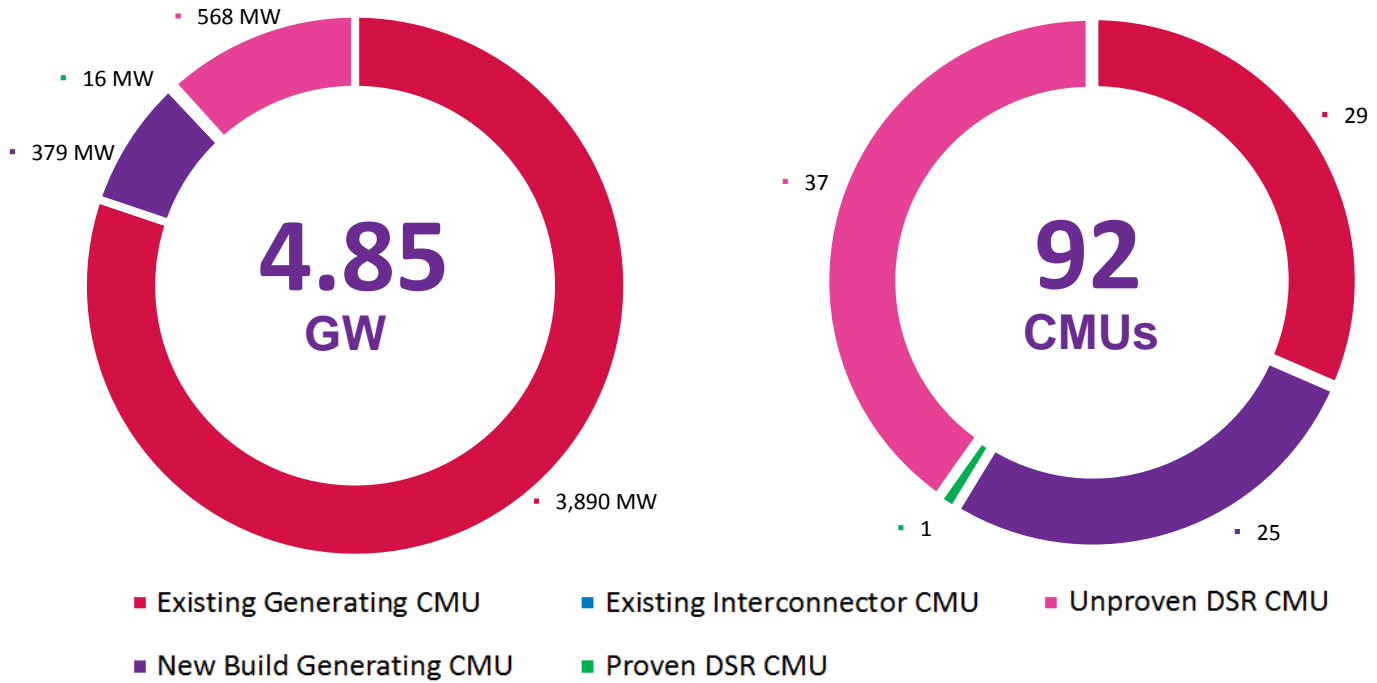

Table 4: Capacity Exited by CMU Classification

CMU TYPE	Capacity (MW)	%	No. of CMUs	%
Existing Generating	3,890.308	80.17	29	31.52
